

Unit 2: Lesson 2: Project 3: Regression or Classification

Regression:

1. The amount a person will spend on a given site in the next 24 months.

Classification (makes the most sense, but could be regression depending on how you structure the questions):

2. What color car someone is going to buy.

Classification (makes the most sense, but could be regression depending on how you structure the questions)

3. How many children a family will have.

Classification:

4. If someone will sign up for a service.

Classification:

5. The number of times someone will get sick in a year.

Classification:

6. The probability someone will get sick in the next month.

Classification makes most sense (but could be regression depending on how you ask the question):

7. Which medicine will work best for a given patient.
